FLEXIBLE FLASHING TAPES
WATER RESISTANT //
WIND RESILIENT
Thermakraft offers two Window Sill Flashing Tapes, Aluband™ and Bulldog™. Both offer exceptional performance ensuring protection from moisture damage in the window opening. Both Aluband and Bulldog are part of the Thermakraft Window Sealing Warranty System when combined with Thermakraft underlay.

Aluband is a premium tape with the benefits of heavier bituminous adhesive and a foil backing offering high strength bond and excellent abrasion resistance. Aluband can be exposed to the elements for up to 42 days. BRANZ 878 [2014].

Bulldog is a cost effective solution and has the advantage of a lower profile with a metalised foil backing. Bulldog is ideal for use in tight applications where a low profile is desirable. Bulldog can be left exposed for up to 42 days (BRANZ 803).

**ADVANTAGES**

Thermakraft Window Sealing Systems are used around framed joinery openings as a secondary weather barrier and are suitable for use in all Wind Zones of NZS 3604 up to, and including “Extra High”.

**KEY FEATURES**

- Adheres to most clean dust free building elements
- Quick, simple and easy to use
- No primer required (under normal situations)

**APPLICATION**

1) Cut the wall underlay/air barrier at a 45° angle away from each corner. Fold flaps tightly into the window or door opening and fix with staples on the back faces of the framing.

2) Fix the Thermakraft Corner Moulded Piece to the bottom corners by way of staples or clouts to the two jambs. *Always ensure that Aluband/Bulldog is applied to surfaces that are clean and free of dust, contaminates, solvents, oils or waxes. Note the following: 150mm wide tape is used for 100mm wide window or door framing, and the 200mm wide tape is used for 140mm to 150mm wide reveals. (With steel framed houses use Double Sided Tape to attach the Thermakraft Aluband Corner Moulded Piece to metal framing).*

3) Measure 200mm up both jambs, add 400mm to the length of the window sill and cut to suit that measurement.

4) First remove the release film from the tape; align the back edge of the tape with the inside edge of the sill.

5) Using the Thermakraft Tool, firmly press the tape onto the wall underlay to ensure good adhesion and ensure the tape is fitted tightly into the jamb to sill corners.

6) At the sill/jamb corners cut the tape from the external edge of the frame outwards. Fold flaps back onto the wall underlay/air barrier and press tape firmly for good adhesion.

7) Proceed to fit the Window Flashing Tape to the top corners of the frame (200mm across lintel x 200mm down jamb).

8) For window or door lintel to jamb junction, apply a butterfly using the 75mm wide x 100mm long Aluband/Bulldog. Fix at a 45° angle to the jamb with an overlap at the corner of 3mm.
9) Door frames are to be treated similarly to window openings. The sill may be either a timber or a concrete floor.

Window and door frames
A) Staple orange corner piece to the bottom corner sill. Place tape 200mm up the jambs and across the full width of the sill opening. Align tape with the back of the frame opening.
B) At the top corner place tape 200mm down the jamb and 200mm across the lintel. Place a strip of 75mm tape across the top corner.

10) Meter boxes with built-in flanges to be taped with Window Flashing Tape along each flange to the building underlay.

11) Window Flashing Tape is used to seal the up stand of the window head flashing to the building underlay. (Refer to the cladding manufacturer's details).

IMPORTANT INFORMATION

To assist the adhesion of window flashing tapes
Thermakraft suggests the following two options this is particularly relevant in the following conditions:
• In temperatures below 5ºC
• When adhering to non-woven surfaces such as Covertex™
• When the tape has been lifted or moved after initial application

Application of Heat:
• Press the window sill tape into position in the usual manner
• Apply a gentle heat, using a heat gun on low heat to the top of the window sill tape
• Once the adhesive starts to soften use the Thermakraft tool or a roller to firmly press the tape into the wall underlay ensuring good adhesion
• Take care not to damage the foil face lining

Application of Spray Adhesive:
• Before installing the window sill flashing tape apply a light coating of suitable solvent based spray adhesive (not water based)
• Allow spray adhesive to flash dry. When dry to the touch apply the window sill flashing in the normal manner
• Take care once applied not to disturb the tape until fully cured

Adhesives and Solvents:
After the installation of Aluband/Bulldog, ensure that the edges do not come into contact with solvent based sealants or adhesives. Solvents in these products can adversely affect the adhesion or dissolve the bituminous adhesive and cause it to run. If the application of solvent based adhesives or sealants are necessary, cover the edges with Thermakraft F150 pure foil tape or equivalent foil tape to form a barrier.

LOSP Treated Timber:
Aluband/Bulldog should not be applied directly on to the timber, or indirectly on to a timber sheathed in underlay that has been freshly LOSP treated. Always allow the solvent to fully flash off prior to wrapping in underlay and applying Aluband/Bulldog.

Surface Preparation:
Always ensure that Aluband/Bulldog is applied to surfaces that are clean and free of dust, contaminates, solvents, oils or waxes.

Exposure Time:
Aluband/Bulldog must not be left exposed to the elements for more than 42 days.

Thermakraft Window Sealing Flashing Tapes can be used as a flexible flashing system around window and door joinery openings on timber framed buildings within the following scope:
- the scope limitations of NZBC Acceptable Solution E2/AS1, Paragraph 1.1; and,
- with a risk score of 0-20, calculated in accordance with NZBC Acceptable Solution E2/AS1, Table 2; and,
- with wall cladding systems complying with NZBC Acceptable Solution E2/AS1; or a valid BRANZ appraisal that specifies a flexible flashing system; and,
- with wall underlays compatible with the flashing tape; and,
- situated in NZS3604 Wind Zones up to, and including ‘Extra High’.

Thermakraft Window Sealing Flashing Tapes can be used as a flexible flashing system around window and door joinery openings on steel framed buildings within the following scope:
- the scope limitations of NZBC Acceptable Solution E2/AS1 with regards to building height and floor plan area and,
- constructed with steel framing complying with the NZBC; and,
- with a risk score of 0-20, calculated in accordance with NZBC Acceptable Solution E2/AS1, Table 2; and
- with wall cladding systems covered by a valid BRANZ appraisal; and,
- with wall underlays compatible with the flashing tape; and,
- situated in NZS3604 Wind Zones up to, and including ‘Extra High’.

Thermakraft Window Sealing Flashing Tapes meet the Performance Requirements of NZBC Clauses B2, Durability (B2.3.1 [a] 50 years, B2.3.1 [b] 15 years and B2.3.2), E2 External Moisture, and F2 Hazardous Building Materials.

Thermakraft Window Sealing Flashing Tapes are expected to have a serviceable life equal to that of the cladding, when installed in accordance with this application and installation sheet, provided they are not exposed to the weather or ultra-violet (UV) for a total number of no more than 42 days, or are damaged on installation.

Thermakraft Window Sealing Flashing Tapes are designed to work on all kraft based building underlays that meet the requirements of NZBC E2/AS1 Table 23, and on all Thermakraft BRANZ appraised wall underlays.

Thermakraft Window Sealing Flashing Tapes should be installed when temperatures are above 5ºC.

The recommendations contained in Thermakraft’s literature are based on good building practice, but are not an exhaustive statement of all relevant information and are subject to any conditions contained in the Warranty. All product dimensions and performance claims are subject to any variation caused by normal manufacturing process and tolerances. Furthermore, as the successful performance of the relevant system depends on numerous factors outside the control of Thermakraft (for example quality of workmanship and design), Thermakraft shall not be liable for the recommendations in that literature and the performance of the Product, including its suitability for any purpose or ability to satisfy the relevant provisions of the Building Code, regulations and standards. Literature subject to change without notification. Latest documentation can be found on the website.

Thermakraft Window Sealing Flashing Tapes exceed the requirements of NZBC E2/AS1, Table 23.

Thermakraft Window Sealing Flashing Tapes are designed to work on all kraft based building underlays that meet the requirements of NZBC E2/AS1 Table 23, and on all Thermakraft BRANZ appraised wall underlays.

Thermakraft Window Sealing Flashing Tapes should be installed when temperatures are above 5ºC.

Thermakraft’s large and varied range of products are available through all leading hardware stores, building supplies, timber merchants and roll formers throughout New Zealand.
